XML ECG Anonymous File Converter

(available in English only)

Click on a blue button to select a file

This software is provided as-is, without any express or implied warranty. In no event shall Philips

Medical Systems be held liable for any damages arising from the use of this software.

The **XML ECG Anonymous File Converter** application removes all personal patient identification information and institution and other location information from an **ECG** file. The resulting generic ECG file can then be used for research or other purposes. The application also converts any standard **Philips ECG XML** file with **UTF-16** character encoding to an **XML ECG** file with **UTF-8** character encoding. This conversion process reduces the overall size of the **XML ECG** file by half.

This converter application has been designed for and exclusively tested with **US English ECG** files. This application should not be used with ECG files that require full **UTF-16** encoding.

This application is compatible with **XML ECGs** generated by the **Philips PageWriter Trim** and **PageWriterTouch** cardiographs, and the **Philips Intellivue Bedside Monitor and Information System** (with 12-lead capability), or with **XML ECGs** exported by the **Philips TraceMasterVue ECG Management System**.

The **XML ECG Anonymous File Converter** application operates with Microsoft **XML Core Services** (**MSXML 4.0 library**) version 4.0 or higher. Click the button below for more information.
